

**TECHNOLOGICAL INSTITUTE OF THE PHILIPPINES**  
**COLLEGE OF COMPUTER STUDIES**  
938 Aurora Boulevard, Cubao, Quezon City

**ITE 405 – APPLIED PLOTTING, CHARTING, DATA REPRESENTATION**

Summer SY: 2024-2025

**Prelim** Period

Laboratory Task

Names: Jasper F. Cadeliña Clarence C. Cortina	Program: BSCS
Section: CS33S3	Instructor: Ms. Monaliza Gregorio

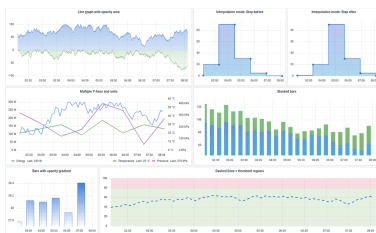

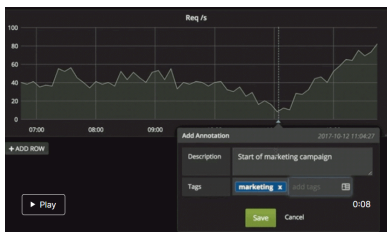

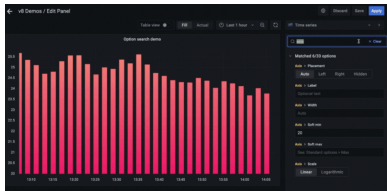

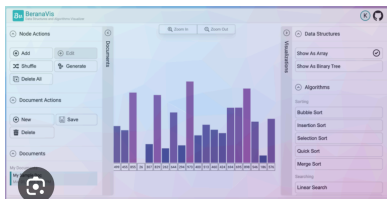

**Objective:**

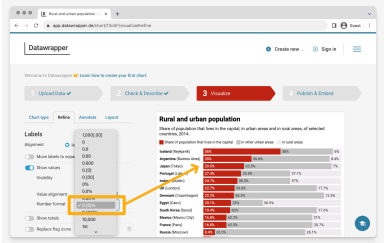

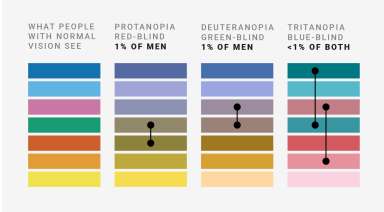

Students will be able to identify various online applications for data visualization, select and explore three open-source tools, analyze their features, and document their functionalities. Additionally, students will research mobile applications for data visualization and present relevant details in a structured format.

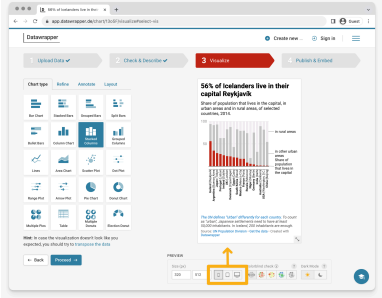

**Instructions:**

- Select a partner.
- Identify the different online applications for data visualization.
- Select three (3) open source applications for data visualization.
- Explore these tools. Provide the following details organized in a table (Software, Description, Tools/Features, Sample Screenshots, its parts and functions)
- Identify different mobile applications that you can use for data visualization. (Software, Description, Tools/Features, Sample Screenshots).

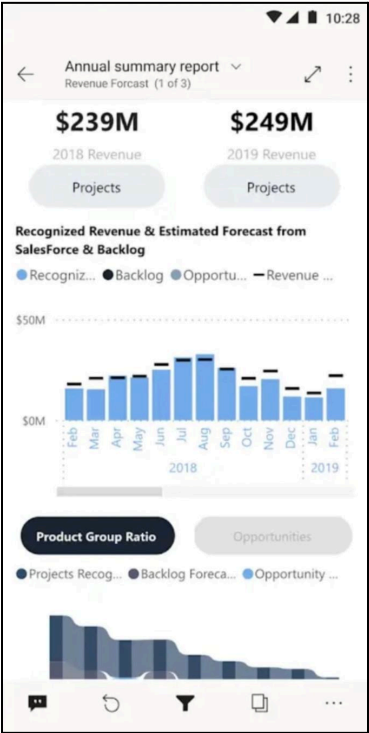

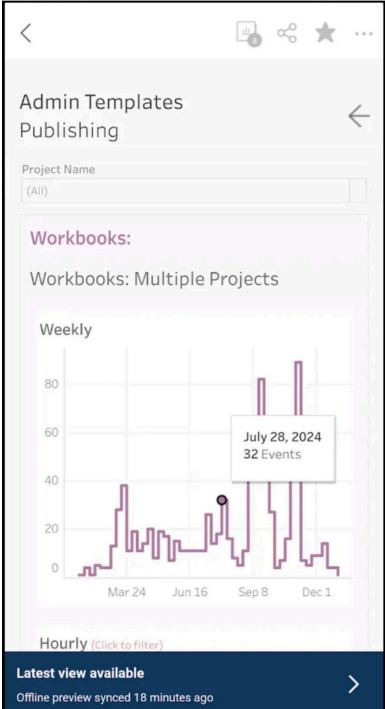

## Open Source Applications

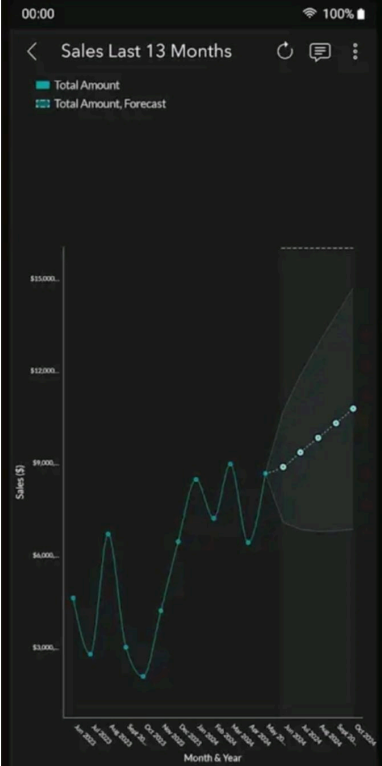

Software	Description	Tools/Features	Sample Screenshots	Parts and Functions
<b>GRAFANA</b>	Open-source platform for real-time dashboards and time-series analytics	<p>Supports multiple data sources (e.g., MySQL, PostgreSQL, Prometheus)</p> <p>Grafana has alerting system that centralizes all of alerts in one simple UI</p> <p>Plugins at ecosystem that enables third-party apps to collaborate and render the data</p>	  	<p>Panels are the basic building block in <b>Grafana</b> composed of a query and a visualization, a graphical representation of query results</p> <p><b>Grafana live</b> offers real-time data connection that listen to events happening on the data</p> <p>If a user needs other data sources, Grafana offers installing of one of the many data source plugins</p>
<b>D3.js</b>	JavaScript library for creating dynamic, browser-based visualizations	<p>Supports SVG, HTML, and CSS integration which makes the programmer more flexibility than being limited.</p> <p>Interactive and animated charts</p>	 	<p>Uses DOM manipulation for rendering graphs, just like html websites.</p> <p>D3.js provides tools for mapping data values to visual</p>

		<p>Javascript itself has Extensive API for custom visualizations, this feature is one of its strongest feature amongst its competitors</p>		<p>representations, such as positions on an axis or colors in a chart.</p> <p>D3.js includes tools for creating and displaying geographic maps and data.</p>
<p><b>Datawrapp er</b></p>	<p>Tool for creating embeddable charts, maps, and tables (ideal for journalism)</p>	<p>Compare to other application which requires programming skills, this supports Drag-and-drop interface</p>		<p><b>Datawrapper</b> focuses on simplicity and accessibility, it even has four life cycle only <b>Four-step workflow:</b>  Upload data →  Visualize →  Annotate →  Embed.</p> <p>Datawrapper offers an API for programmatic interaction with charts, allowing for automation and scalability.</p>
		<p>Responsive designs for mobile and web interface.</p>	 <p>SUGGESTION FOR A COLORBLIND-SAFE PALETTE FROM THE INTERNET</p>	

		<p>Datawrapper supports bar charts, line graphs, heatmaps, and geographical maps, making it a versatile tool for data storytelling.</p>		<p>For users with color blindness, Datawrapper includes a colorblindness simulator to ensure visualizations are accessible to all users.</p>

## Mobile Applications

Software	Description	Tools/Features	Sample Screenshots	Parts and Functions
<b>Microsoft Power BI Mobile</b>	It is a mobile application that helps see and explore data using charts and reports on phone or tablet.	<ul style="list-style-type: none"> <li>Real-time dashboards</li> <li>Interactive charts</li> <li>Filters to view specific data</li> <li>Alerts when data changes</li> </ul>		<p><b>Dashboard</b></p> <ul style="list-style-type: none"> <li>- Shows important numbers and updates.</li> </ul> <p><b>Reports</b></p> <ul style="list-style-type: none"> <li>- Allows clicking and exploring the data.</li> </ul> <p><b>Menu Bar</b></p> <ul style="list-style-type: none"> <li>- Helps on moving between pages</li> </ul> <p><b>Alerts</b></p> <ul style="list-style-type: none"> <li>- Notifies when something important happens.</li> </ul>
<b>Tableau Mobile</b>	It is a mobile application that allows for opening and using of data reports on the go. It works best if reports were already made in Tableau on a computer.	<ul style="list-style-type: none"> <li>Touch-friendly charts</li> <li>Filters and drill-downs</li> <li>Works offline</li> <li>Face/fingerprint login</li> <li>Mark favorites</li> </ul>		<p><b>Home</b></p> <ul style="list-style-type: none"> <li>- Shows recent and favorite dashboards</li> </ul> <p><b>Charts Page</b></p> <ul style="list-style-type: none"> <li>- Allows for tapping and exploring visuals.</li> </ul> <p><b>Filters Panel</b></p> <ul style="list-style-type: none"> <li>- Helps focus on certain parts of the data.</li> </ul> <p><b>Navigation Bar</b></p> <ul style="list-style-type: none"> <li>- Allows switching between dashboards.</li> </ul>

<b>Zoho Analytics – Mobile BI</b>	<p>It is a mobile application that helps check business reports and dashboards anytime and anywhere. It is good for collaboration use too.</p>	<ul style="list-style-type: none"> <li>• Easy to read reports</li> <li>• AI-powered insights</li> <li>• Offline viewing</li> <li>• Share and comment on reports</li> <li>• Simple layout</li> </ul>		<p><b>Reports Tab</b> - Lists charts and tables</p> <p><b>Dashboard Tab</b> - Combines reports in one screen</p> <p><b>AI Assistant</b> - Answers questions about the data</p> <p><b>Comment Section</b> - Add notes and talk with teammates</p>
